

Case Study on

zomato

Goal: Increase Quality Text Reviews on Food Delivery Vertical

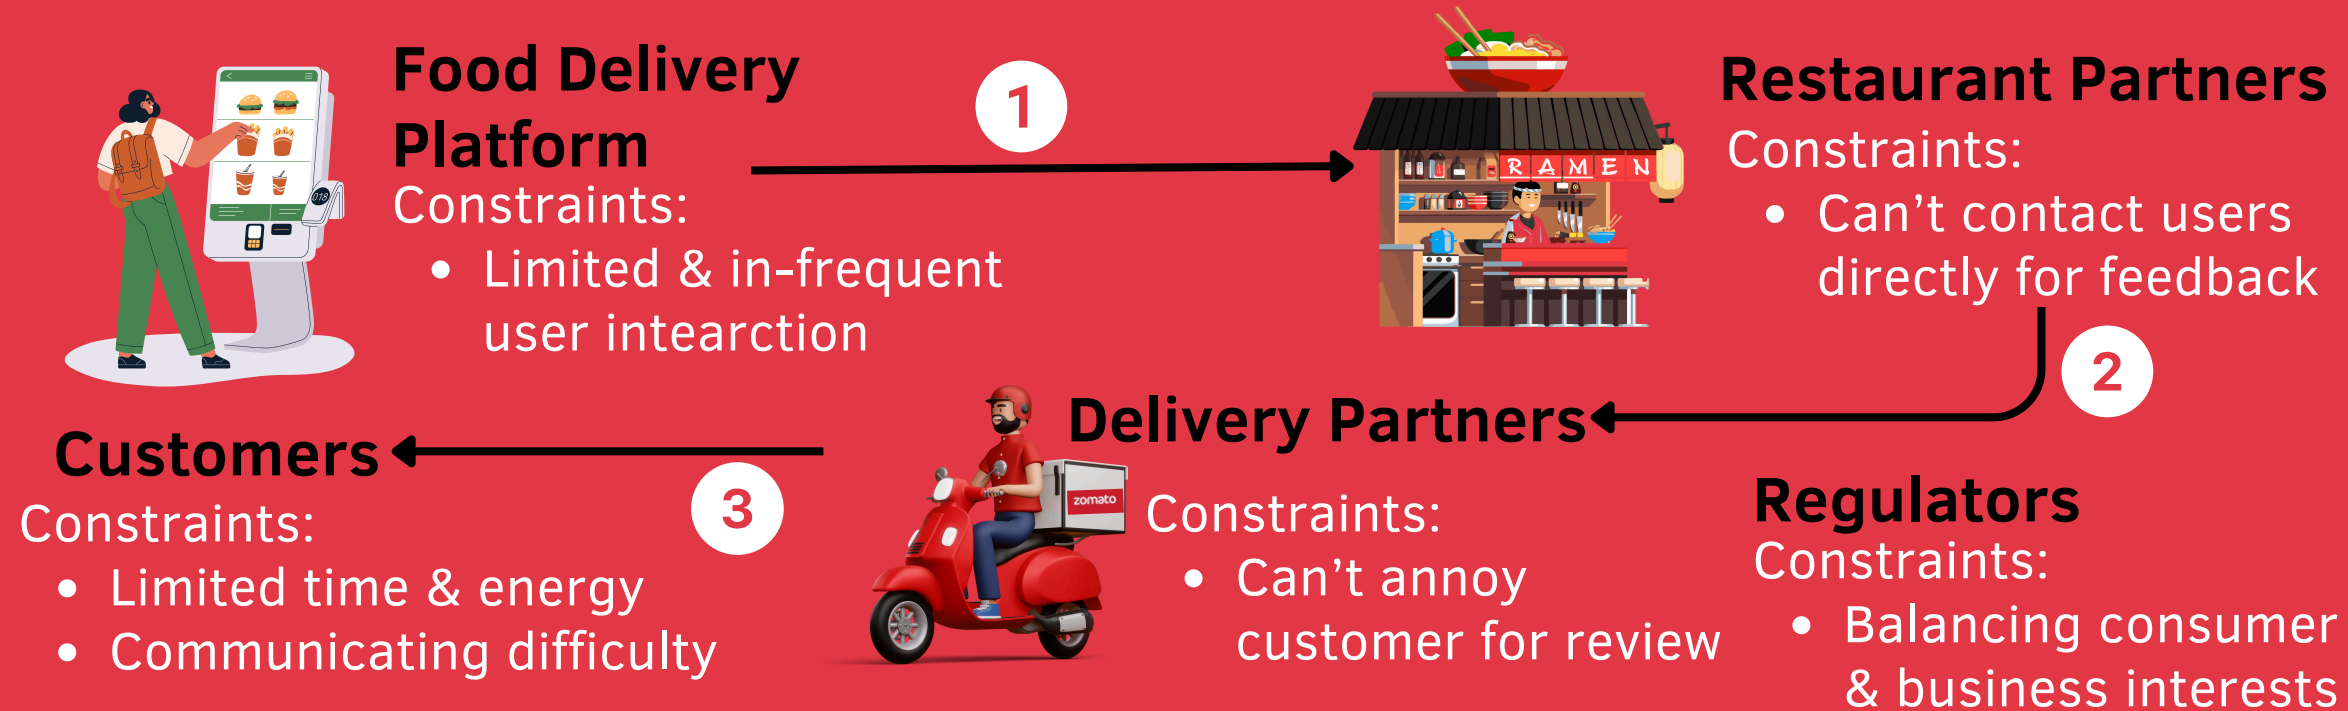

By - Sarada Sahoo

A chef in a dark uniform is plating a dish on a white rectangular plate. The dish includes a piece of meat, some vegetables, and a garnish. The chef is using a small tool to place the garnish. The background shows a wooden table and other plates of food.

Zomato Food Delivery Segment Overview

HOW THE ACTORS INTERACT? ANY CONSTRAINTS?

WHY CHOOSE ZOMATO?

Customers

- Convenience (Delivery, Payment)
- Reliable Service
- Smooth User Experience

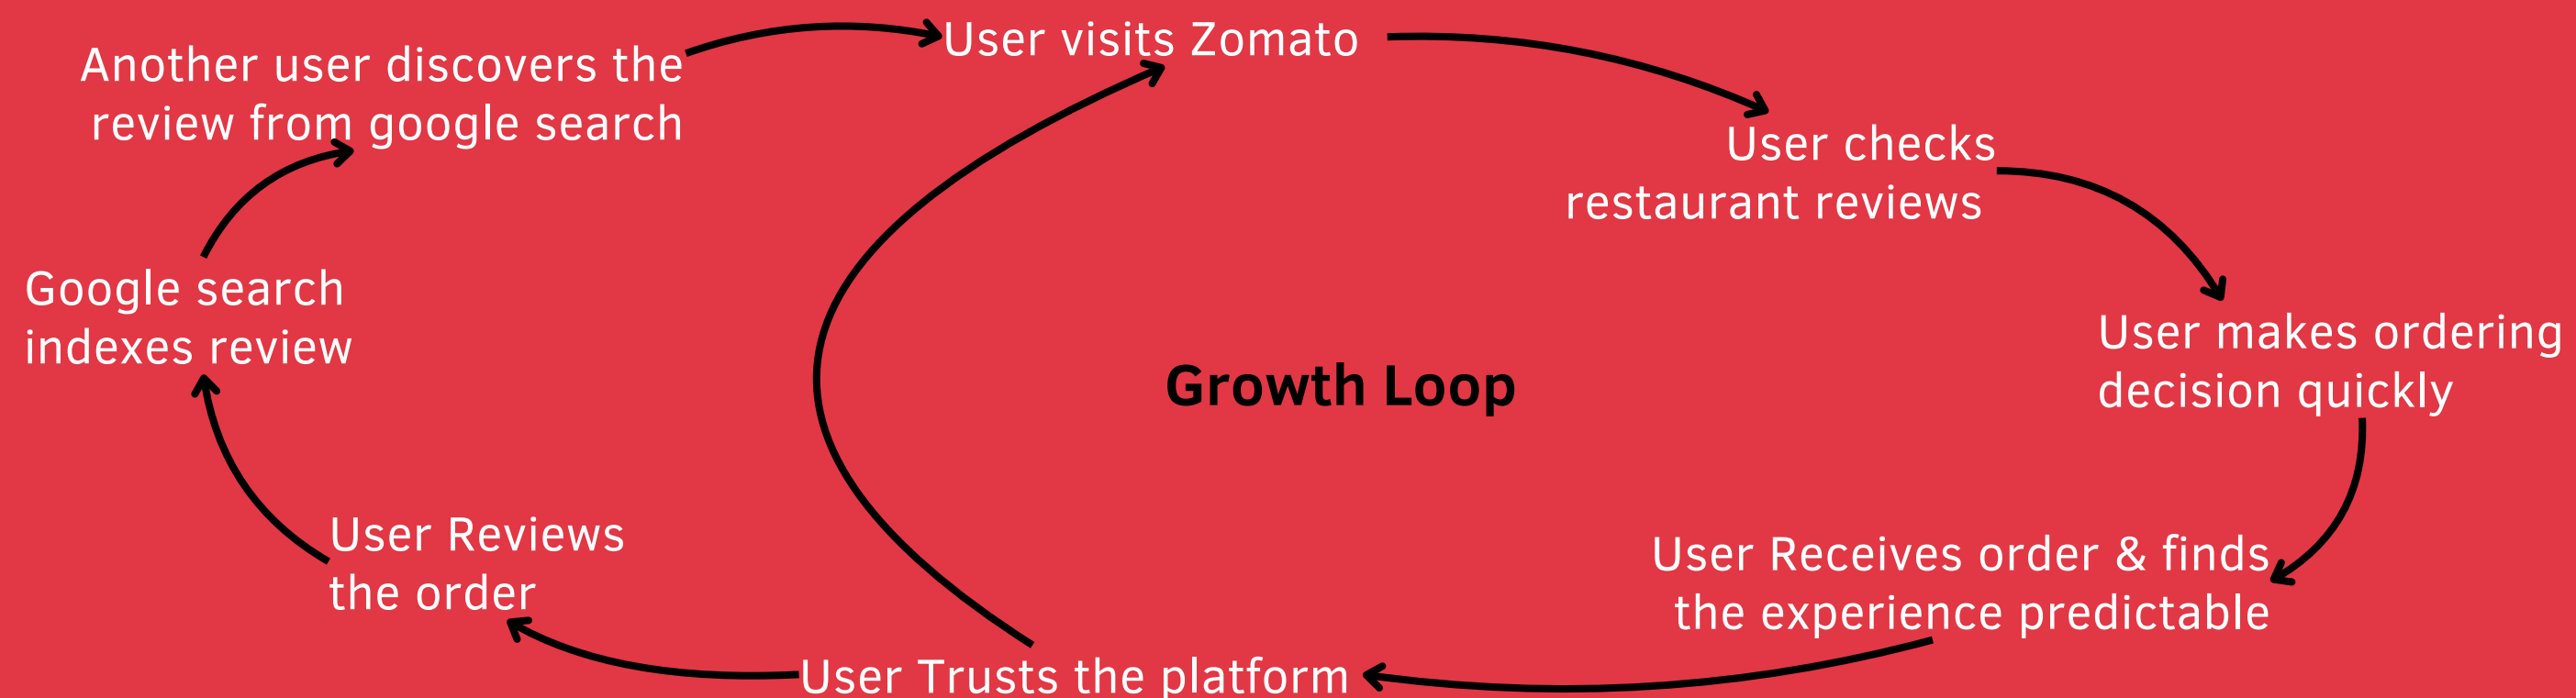

Restaurant Partners

- Online Presence & Promotions
- Optimize Menu & Services

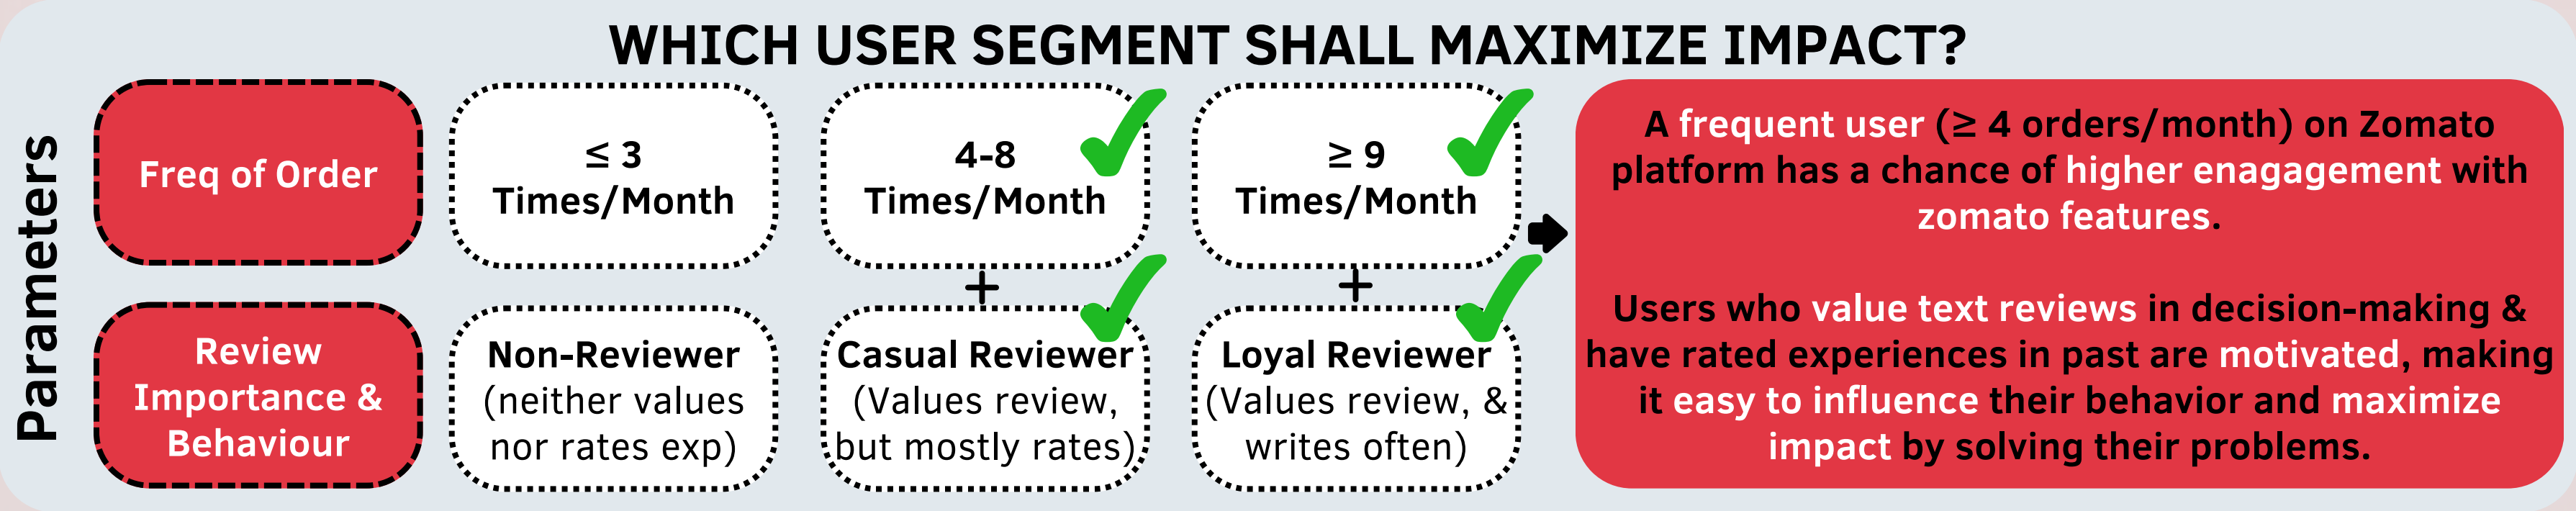

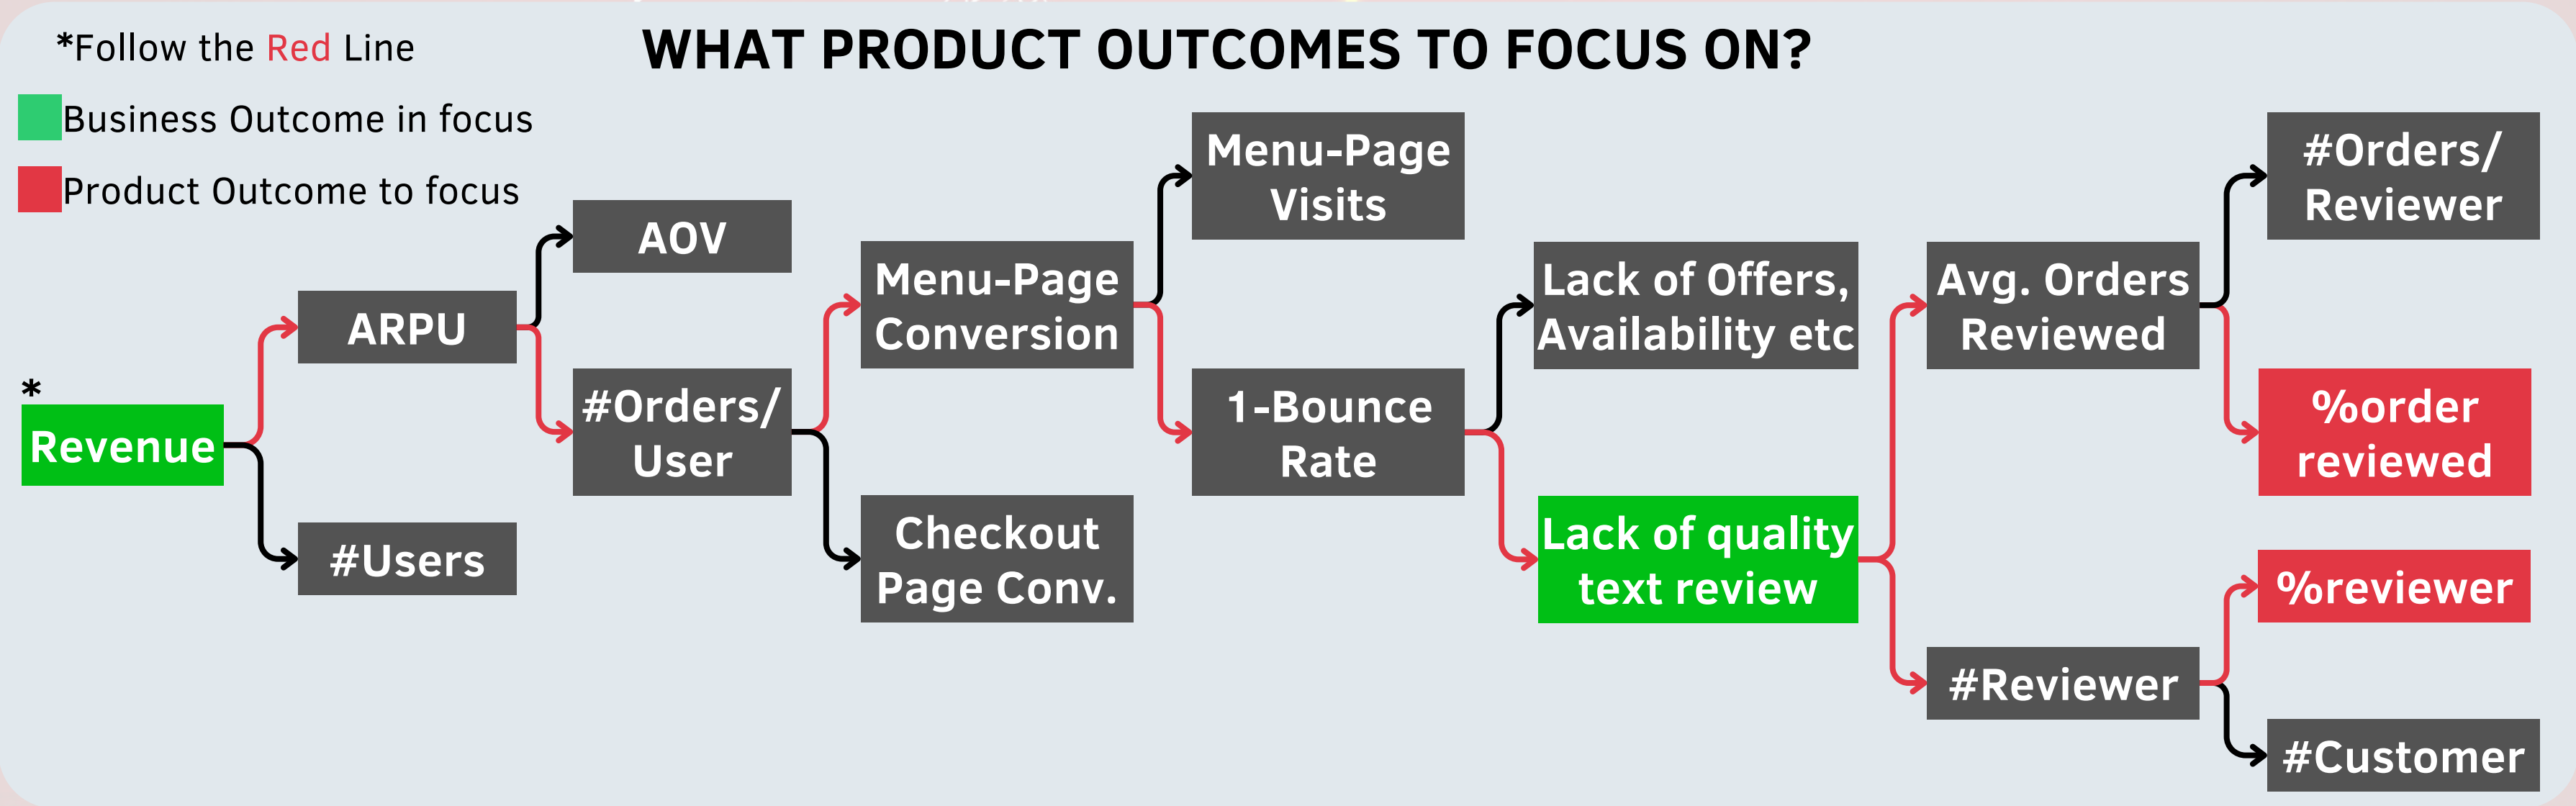

Delivery Partners

- Additional Revenue

WHY TEXT REVIEW MATTERS FOR ZOMATO?

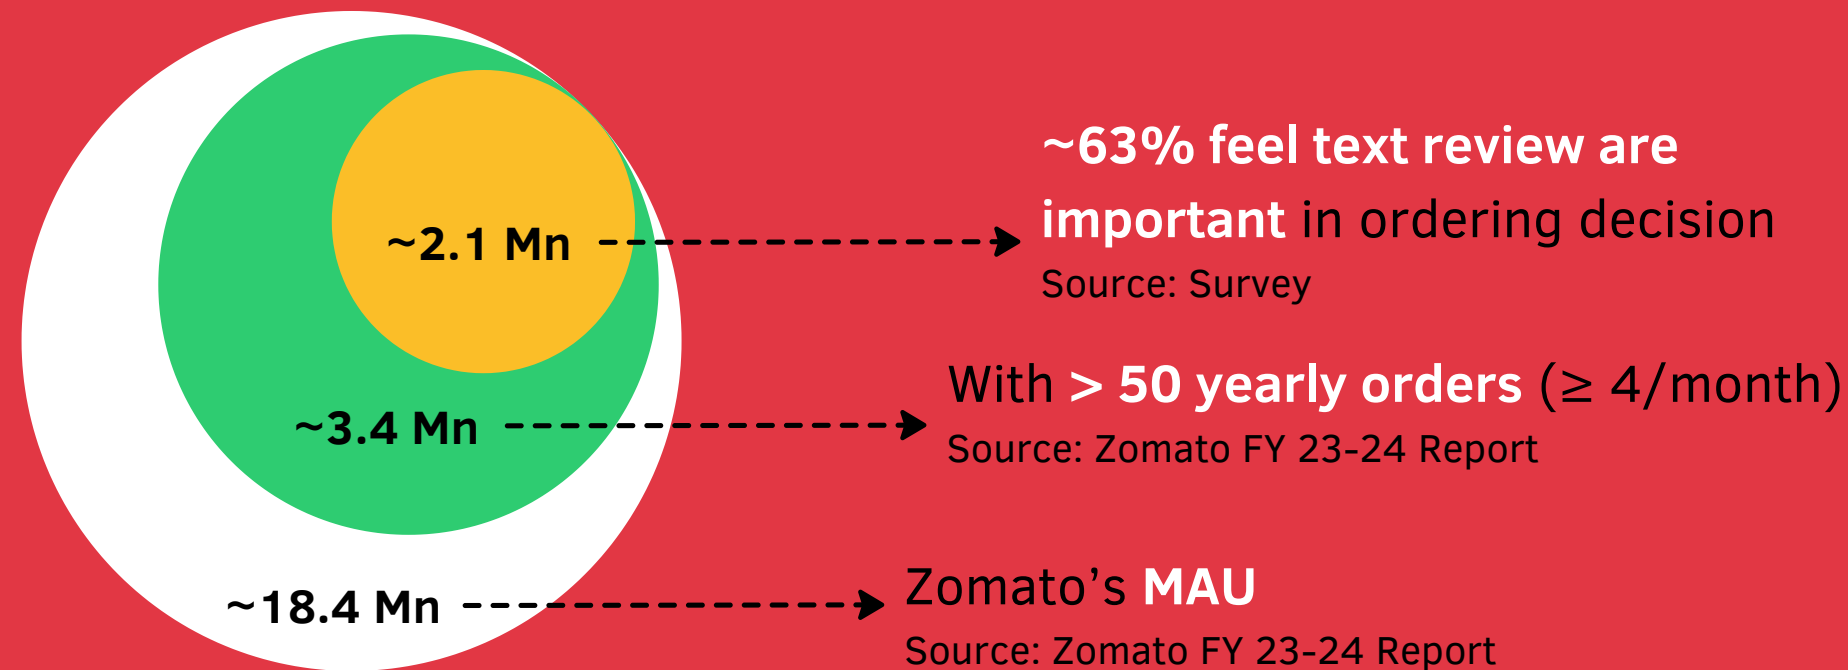

Focus Area

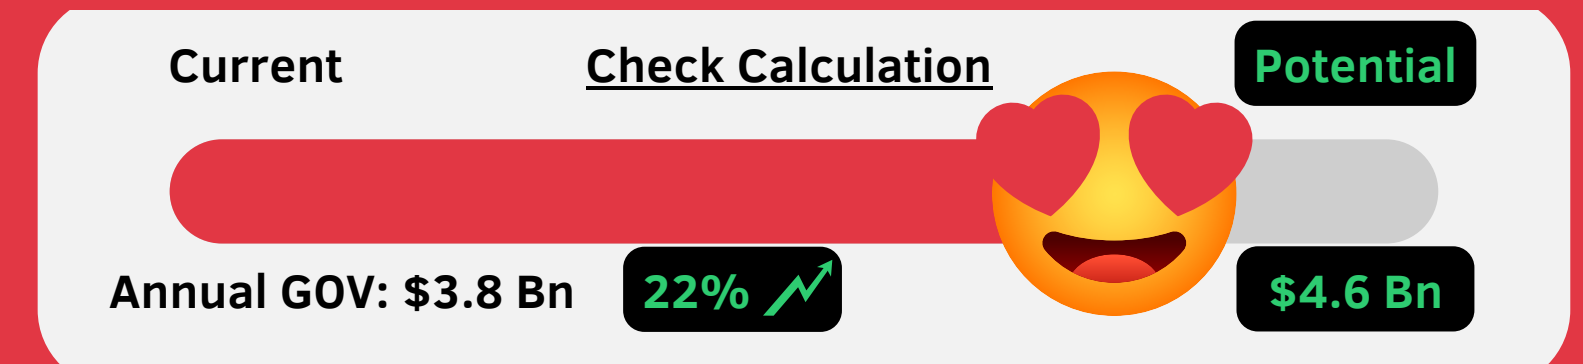

Impact Mapping

WHAT'S THE POTENTIAL IMPACT FROM SOLVING THIS PROBLEM?

Assumptions

1. Avg. orders/year for the target segment = 70 (6/month)
2. Growth in %reviewer = 2X (20%)
3. Growth in %orders with text review/customer = 3X (30%)
4. Text review - Menu page **conversion correlation** = 1% $\uparrow$ $\rightarrow$ 0.2% $\uparrow$
5. Avg. Order Value (Pre & Post cases) = \$ 5 (~₹430)

WHAT BEHAVIOR CHANGES WE WANT?

Users **reviews more ferquently**

Users **reviews** their orders **in time**

User feel **intrinsic-motivation to write** a review

User **feel empowerd & valued** for writing review

WHY USERS NOT BEHAVING THE WAY WE WANT?

Lack of Awareness

Users never discovered feature

Lack of Recall

Users Forgets to review on time

Lack of Value

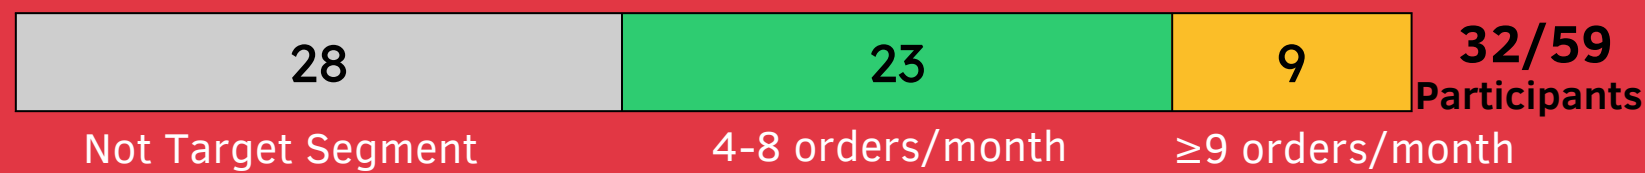

Users found the experience Similar as promised OR
User Seeks some benefit

Lack of Convenience

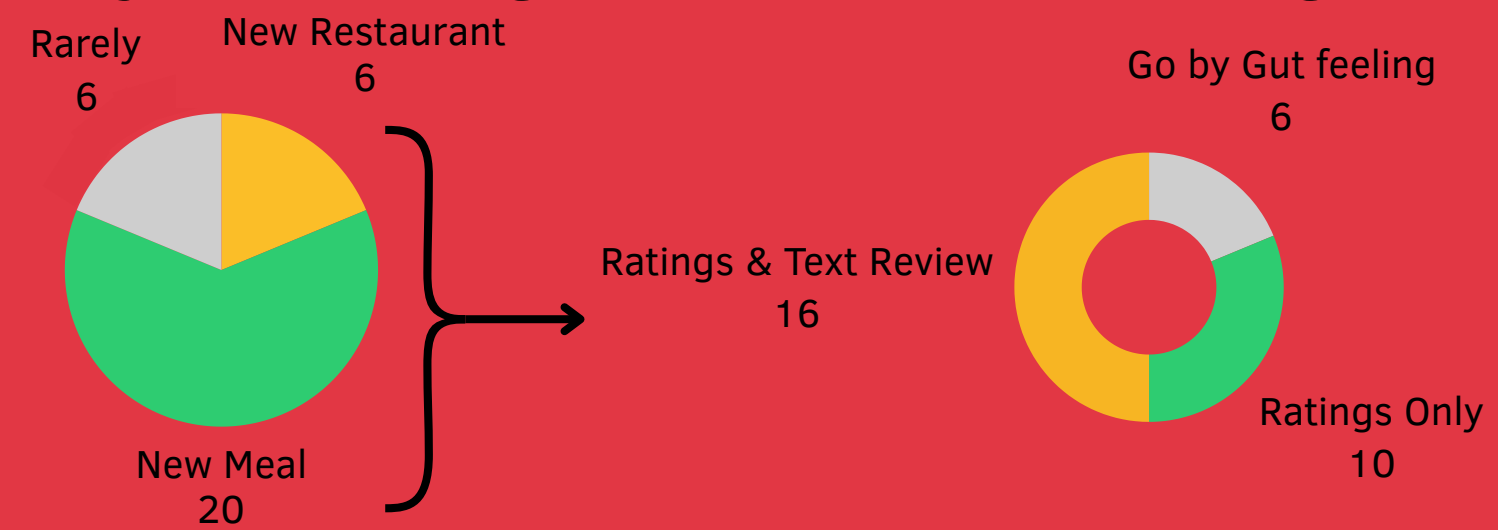

User finds review experience Time intensive OR
Users don't know how to express feelings in writing

Primary Research findings on hypothesis validation

WHAT CUSTOMERS ARE SAYING IN SURVEY?

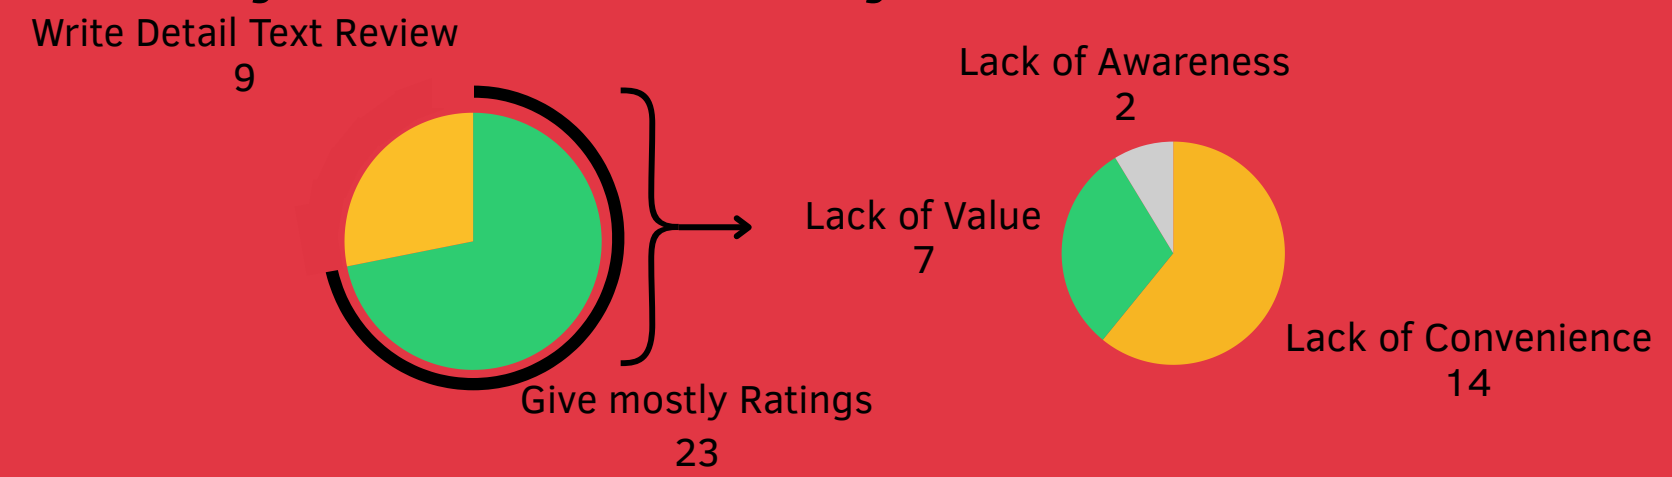

Do they check ratings/reviews before ordering?

50% check text reviews before ordering. 38% check only ratings as they're unaware of reviews section. Validating Lack of awareness

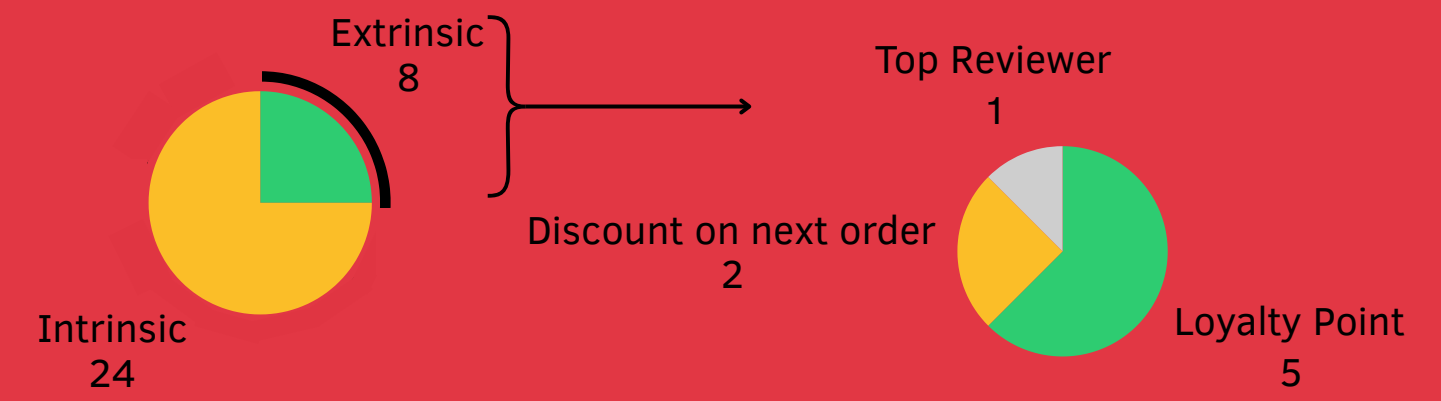

Do they write Reviews? Why Didn't?

28% write a text based review sometimes while, 72% mostly rate their experience. 61% due to Lack of Convenience & 30% due to Lack of Value. Only 9% are unaware of review section.

[Form Link >](#) [Responses>](#)

Source of Motivation behind Ratings/Reviews

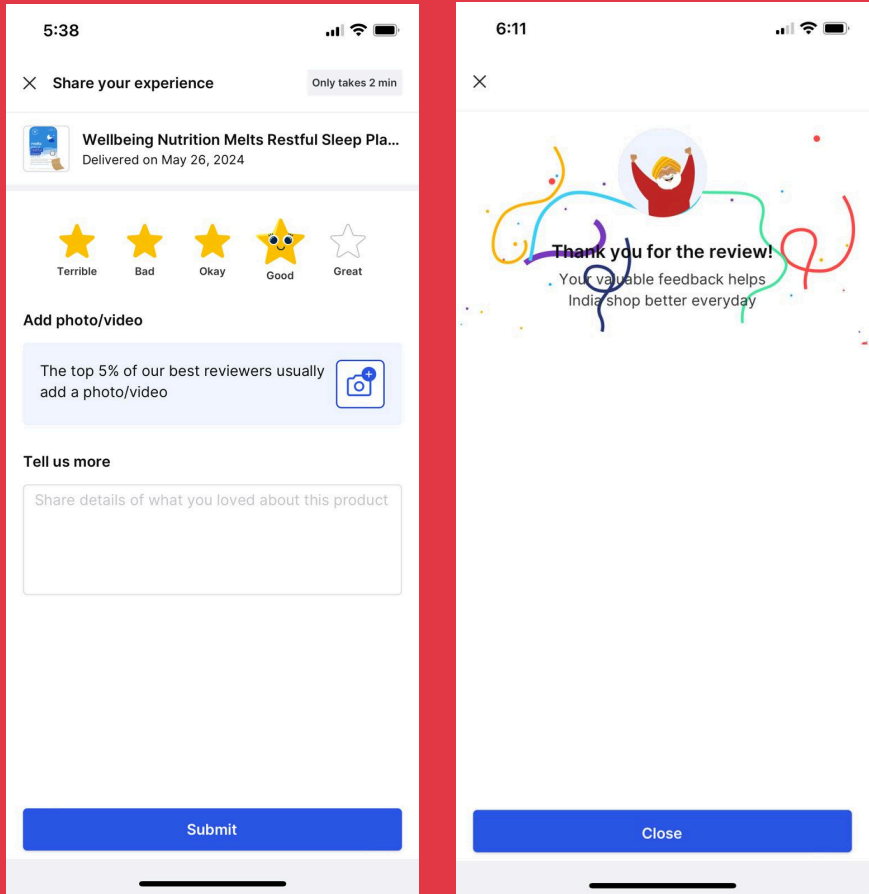

75% of reviewer are intrinsically motivated. Only 25% seek external motivation. Of them only 25% ordered ≥9 times/month.

WHY CUSTOMERS SAID WHAT THEY SAID IN SURVEY?

- Why?** User do not leave text reviews.
- Why?** "User find the experience inconvenient and non-rewarding."
- Why?** "User have to spend energy in rating multiple items without any tangible benefit for same."
- Why?** "Multi-decision points in the review screen feels like a chore. Without any perceived value for self or others it feels unjustified."

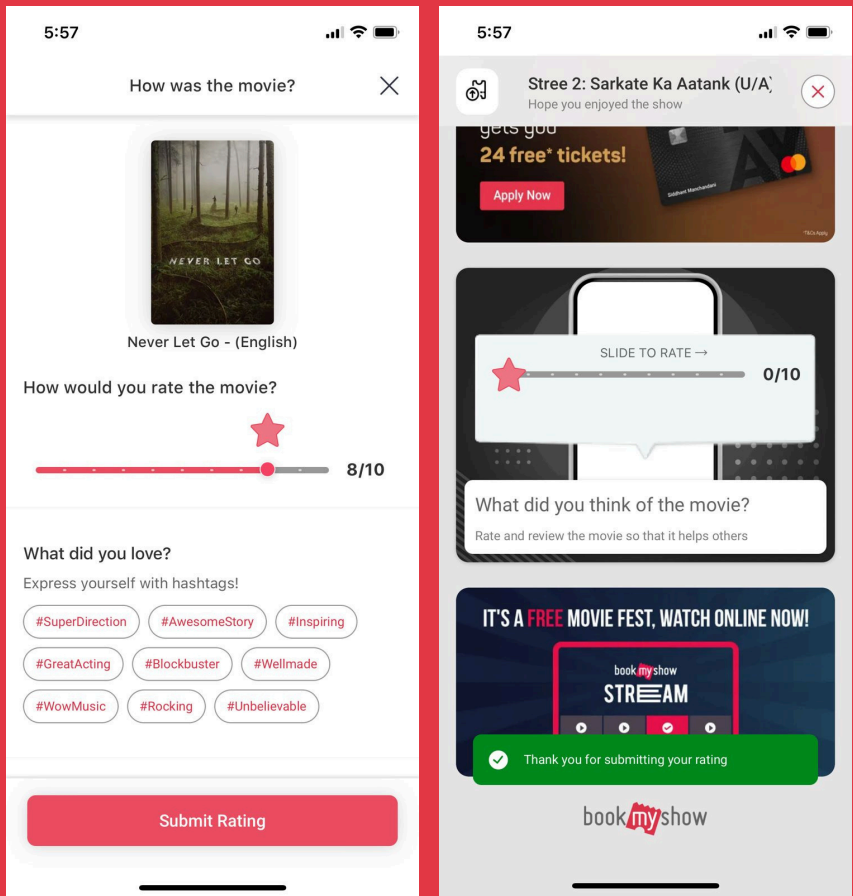

Competitor Reserach

Flipkart - eCommerce

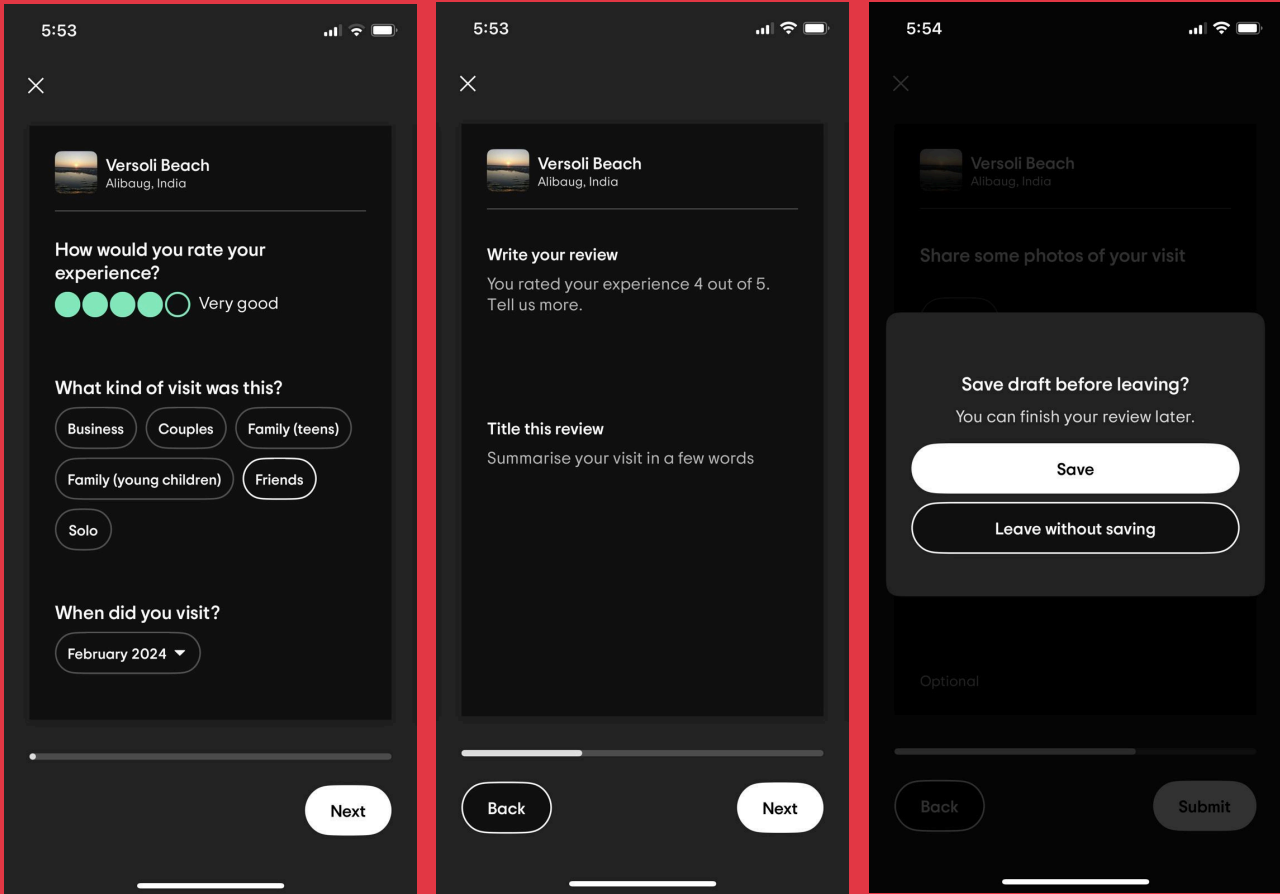

Emoji effect || Top-Reviewer recomm.
|| Catchy Thank you note

bookmyshow-Ticketing

Slide to rate seems fun || Hashtag
seems convenient and catchy

Tripadvisor - Travel

Conversational tone for collecting informations
seems appealing || Meesage on exiting review

Key Learnings

During Review Experience

- Rating explantion (emoji/text)
- Voice Based/AI enabled Review
- Top-reviewer recommendation
- Keyword based review
- Conversational tone for seeking information?

Post Review Experience

- Nudge to write detail review second time?
- Catchy Thank you message
- Rewards for detailed text/image review

User Persona

Anik, 27 Yr, Teacher, Kolkata

Shifted to Goa 4 month back

Orders at least once a week

Busy, Ambivert, Foodie,
Independent, Unmarried

"I want to discover new
taste, and help others like me
with my feedback."

Needs

- To **discover new & popular taste** in the area through relevant text reviews
- To let **zomato & other users** to learn from his experience with minimal effort
- To be **rewarded for a text feedback** unless he feel self-motivated

Pain-Points

- **Could not find relevant/quality text reviews** for restaurants
- Finds the text review **process too cumbersome & inconvenient**
- Feels reviewing **experience is too much effort without rewards or recognition**

Problem Identification

WHAT IS THE TRUE PROBLEM?

Users find **review process** to be **tedious**, as there are a **lot many actions to do**, and this **effort is not justified with any rewards or recognition**. Leading to only casual ratings left by users post-ordering.

WHO ARE FACING THE PROBLEM?

2.14 Mn highly active & engaged users who **order >50 times/year** (63% of total) and **casually reviewing** their experience are facing the problem. **100%** of them **feel text reviews help make better ordering decison**.

HOW DO WE KNOW IT's A REAL PROBLEM?

50% regularly check text reviews before ordering, while **12%** know what to order, hence check rarely. Rest **38%** are **unaware of Feature** on Menu Page. Also, while **100%** rate their order, only **28%** write a text Review. Those who don't; **61%** find it inconvenient & **30%** feel it not worth the effort.

WHAT IS THE VALUE GENERATED FROM SOLVING?

For the Target User

- **Better user experience** post order
- **Feel valued** for their review
- **Rich repository of quality reviews**

For the Business

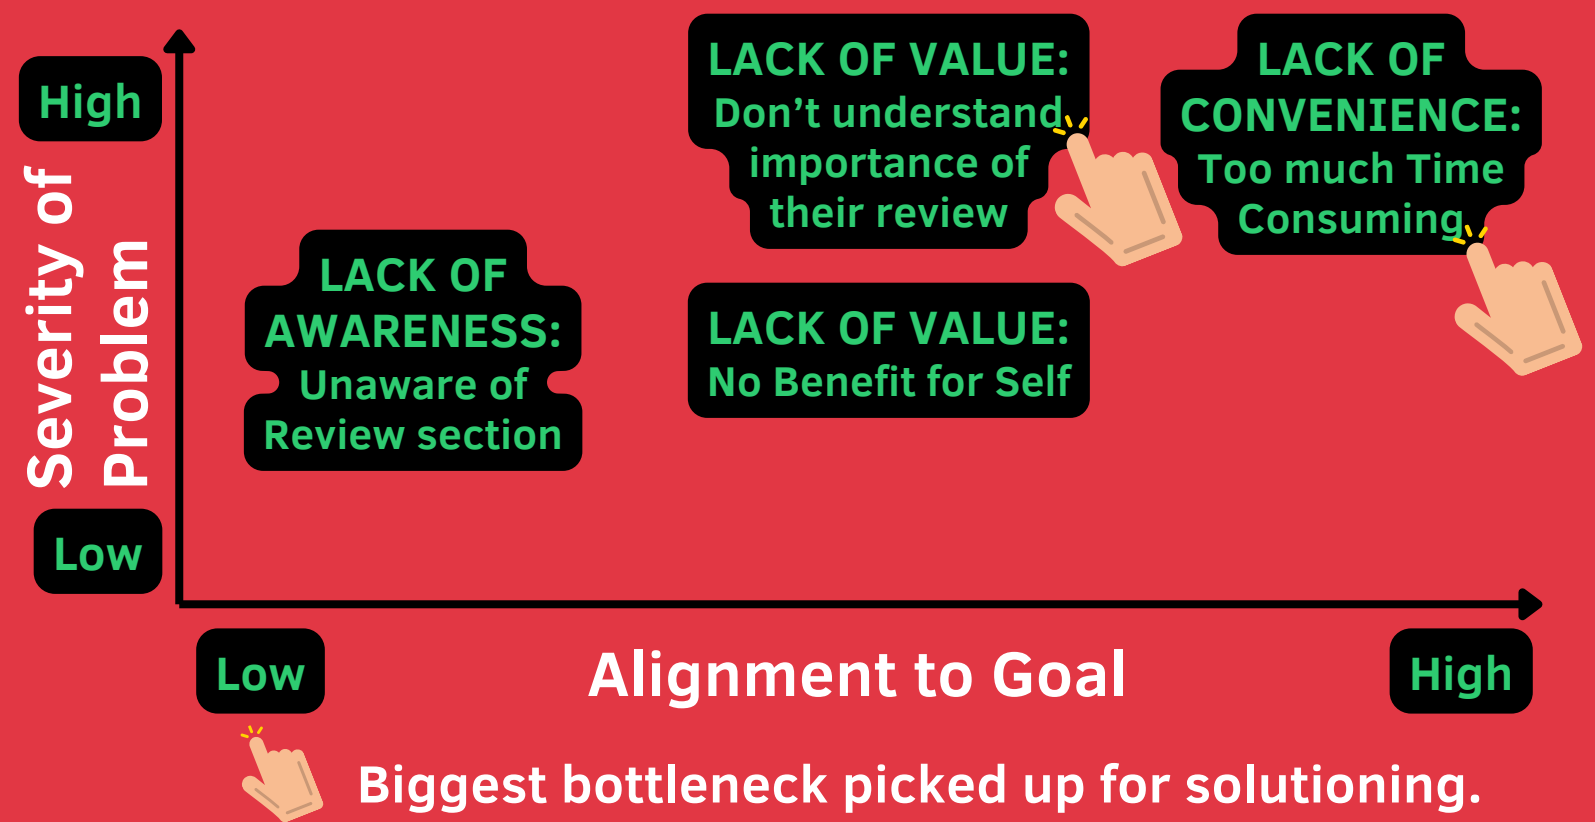

- **↑ engagement from core users**
- **Better focus on improving services**
- **↑ conversion on menu page, ↓ cost on grievances**

WHY SOLVE NOW?

Zomato is aiming to be **profitable**, which means **more orders from this segment**. Poor quality of review **hinder decision-making** leading to **unpredictable exp** for users & **costing Zomato** in terms of **negative reviews & grievance expenses**.

Priority of Problem & Solution

WHICH PAIN-POINT TO ADDRESS FIRST?

WHAT SOLUTION IDEAS MIGHT WORK?

Lean Review with Speech-text	Keyword Based AI Review	AI Review Assistant
Users gives the overall feedback of order, basis which tags are shown for each food item. Users are asked for detailed review which can be captured using voice inputs . User is made aware of the value of the review.	User gives overall feedback basis which keyword tags generated for taste, quantity, package . GPT uses tags as prompt to create human-like reviews .	User provides overall feedback & a default text is populated by GPT basis the rating and past similar reviews for food item & restaurant type. This handles lack of past review problem.

User Benefits?

↓ writing anxiety -> High	High	Med
↓ decision effort -> High	Med	Med
↑ Feel Valued -> High	High	High

Business Benefits?

↑ %reviewers -> High	High	Med
↑ %order review -> High	High	Med
↑ better exp -> High	High	Med

Major Risks?

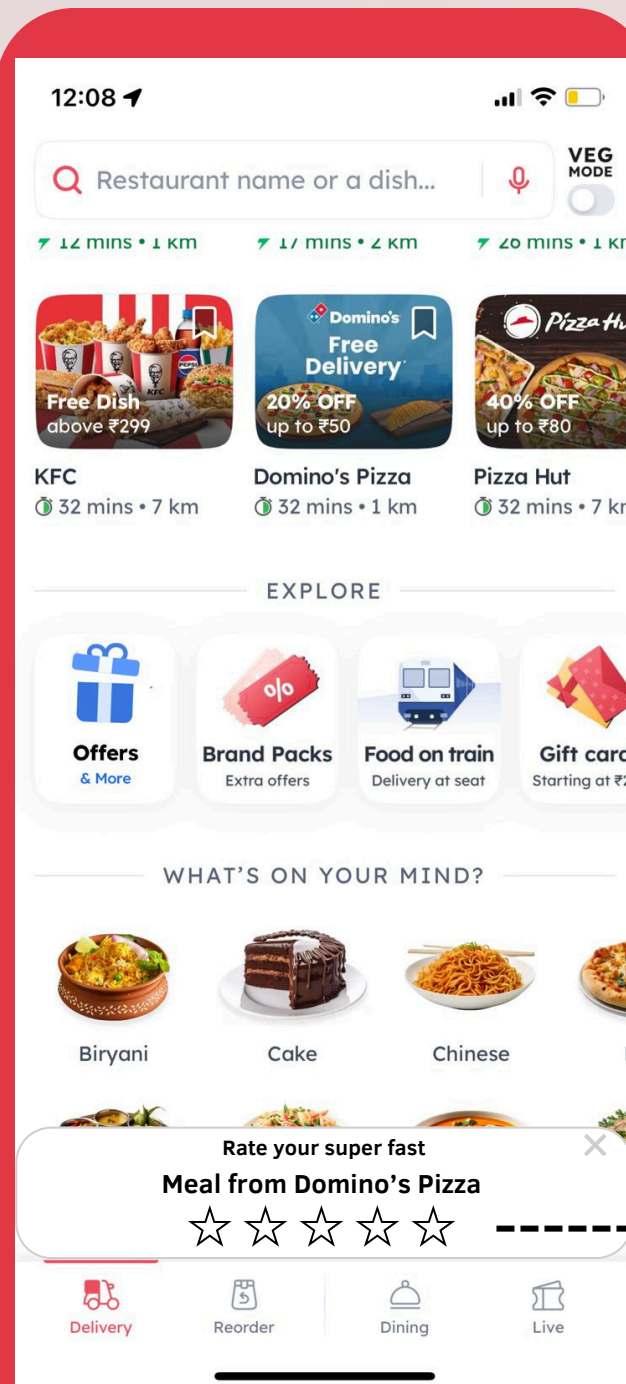

Usability Risk	Value & Usability Risk	Value & Usability Risk
-----------------------	-----------------------------------	-----------------------------------

WHICH SOLUTION TO PRIORITIZE FIRST?

Parameters	Lean Review with Speech-text	Keyword AI Review	AI Review Assistant
Reach (R)	5	5	4
Impact (I)	5	4	3
Confidence (C)	4	3	3
Effort (E)	4	5	4
R*I*C/E	25	12	9

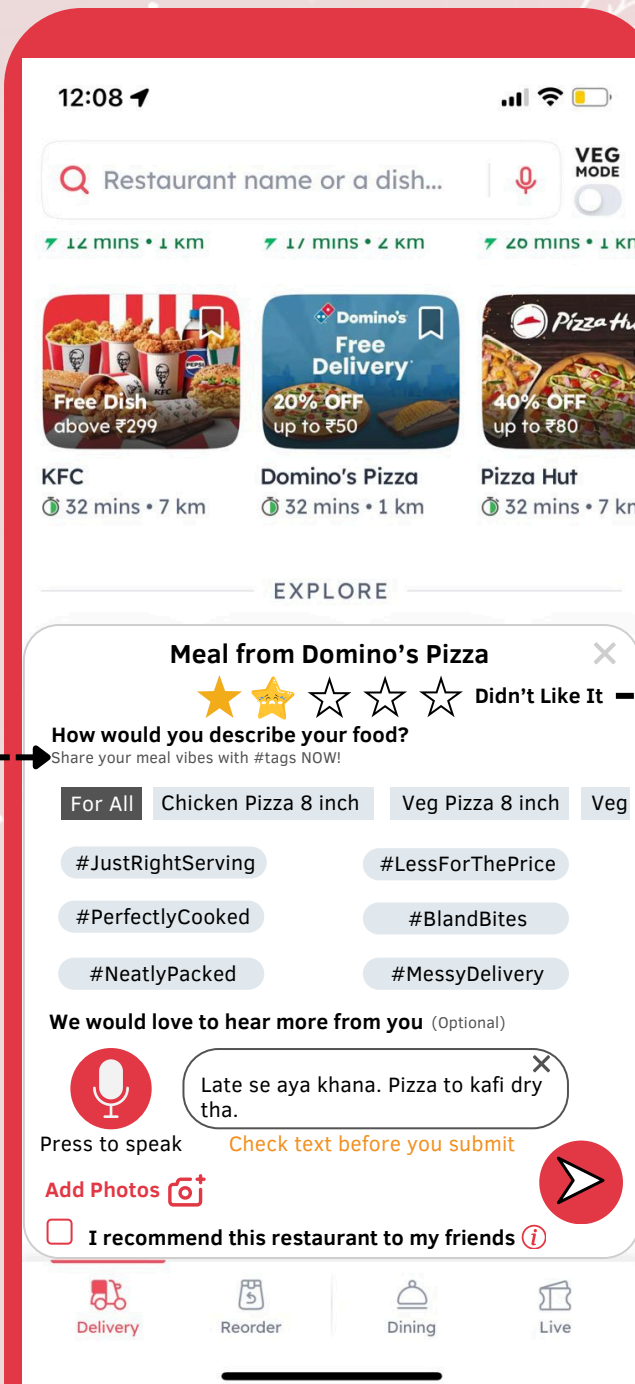

Design Mockups

Want to see UserFlow?

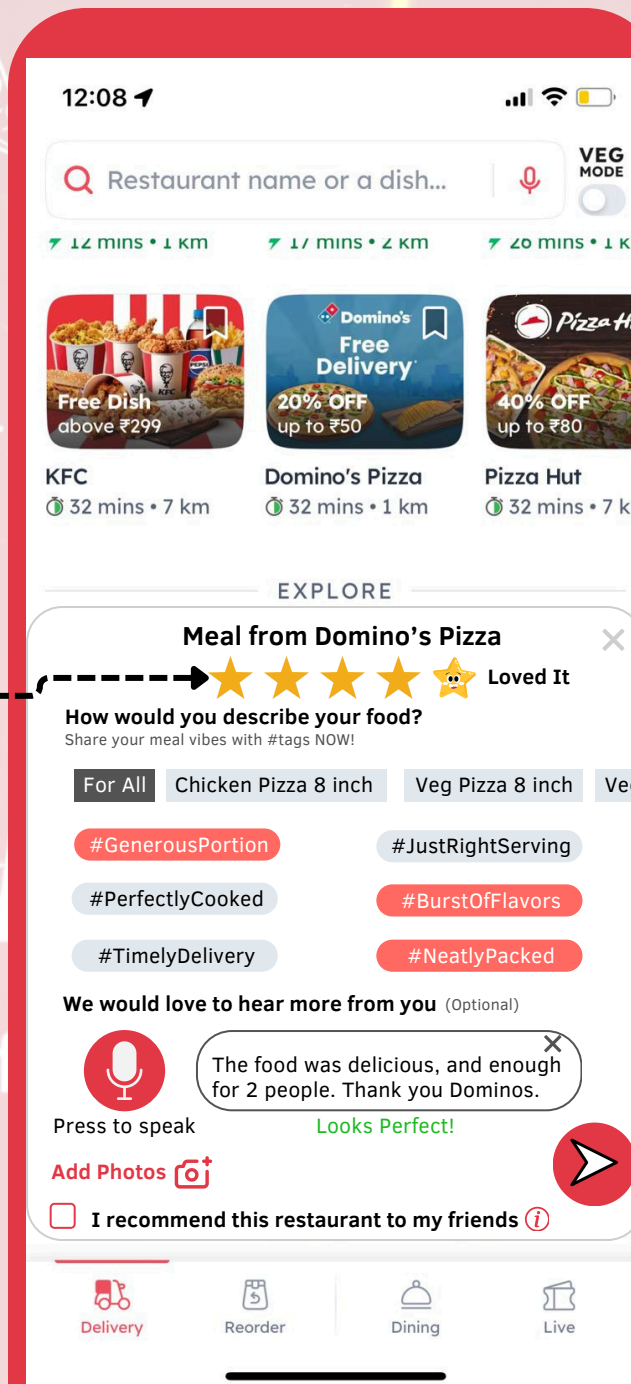

User finds the rating nudge at the bottom, when he opens app.

Upon selecting rating the page expands which gives a native experience.

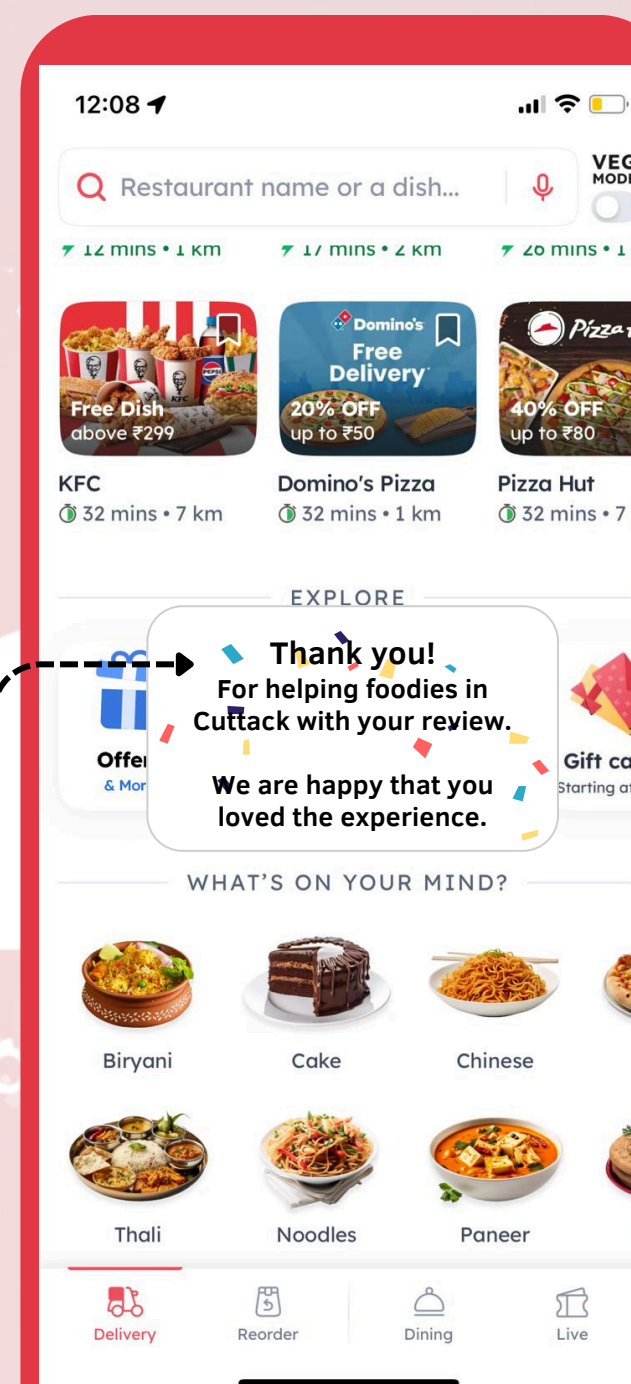

If user does not want to leave a review, they can either submit or close the screen.

If user chooses a poor rating the #tags is a mix of +ve & -ve experiences.

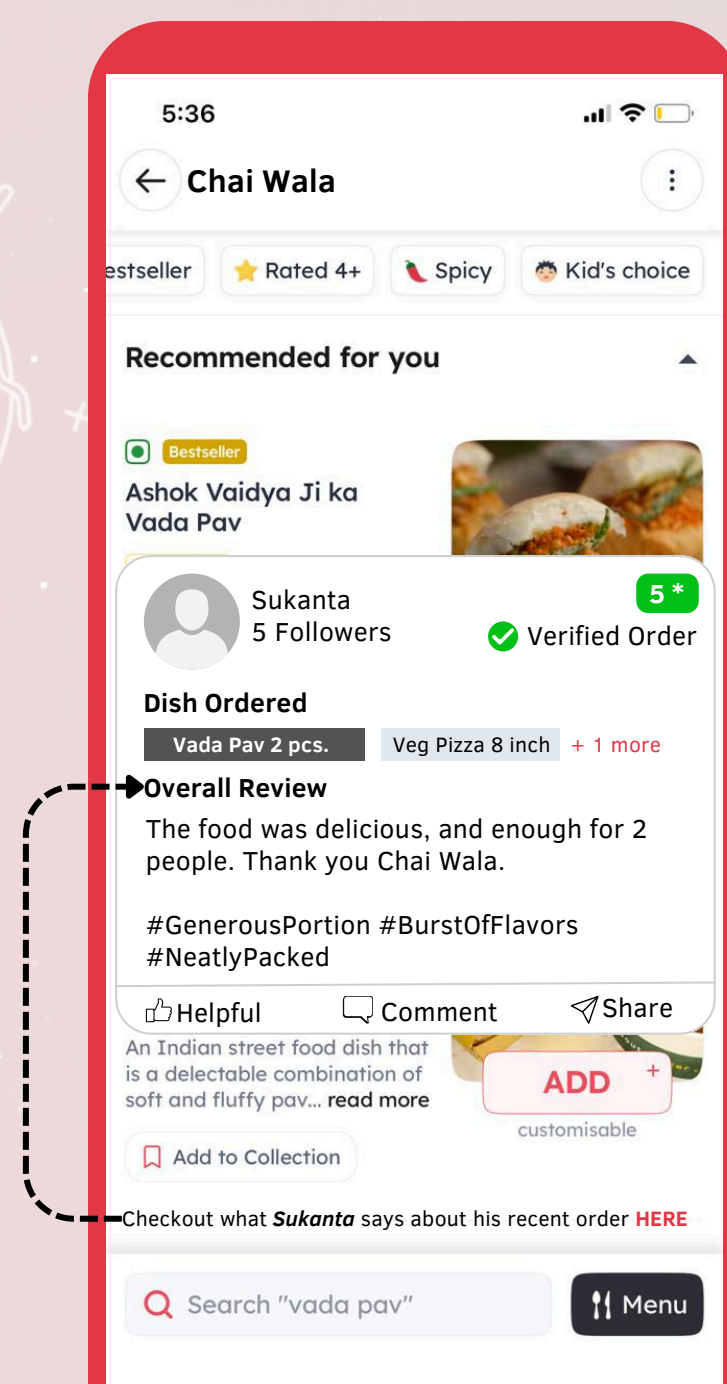

If user changes the rating, he sees different #tags. The text output does not change in such cases.

If there is any issue with capturing audio, user receives a suggestion.

Upon submitting review, user sees an acknowledgment message.

This is more conversational and intended to make user feel valued.

User sees the recent reviews by users for any food item, and makes an informed & faster decision.

This showcases the tangible benefit of a review.

Avoiding Pitfalls & Measuring Success

WHY THE SOLUTION MIGHT FAIL?

Potential Pitfalls	Mitigations
Value Risk: Users might find the compact UI cumbersome. OR The recent review might be significantly different	A/B Testing: A/B test UI & feature ability to improve review Most Relevant Review: User sees most popular & recent to its current rating
Usability Risk: User might find feature cumbersome if faced with frequent errors	Prompt user: User gets suggestion when feature isn't working well
Feasibility Risk: Running an offline speech model requires decent device processing power	Online ASR as backup: Switch to online Automatic Speech Recognition tools for low-spec devices
Scalability Issues: This might be a QC nightmare as the reviews count increases	NLU Based QC: Natural Language Understanding (NLU) tools to be used to infer context and restrict prohibited content post reviewing

HOW TO MEASURE SUCCESS?

Focus Metric %change in monthly reviews

L1 Primary Functional Metric

%change in monthly reviewers

Does solution converts casual reviewer to loyal ones?

%change in orders with reviews

Does solution streamlines reviewing process?

%change in menu page conv.

Does quality text review correlates to higher conv.?

CTR on recent review per order

Does recent review has any contribution in order conv.?

L2 Primary Functional Metric

%change in time to write review

Does solution effectively solves convenience issues?

Avg #clicks on mic button/rating

Does solution has any usability or value risk?

Failure Metric Review Abandonment Rate

Does users drop-off after using the features?

Order Abandonment Rate

Does recent review lead to high order abandonment?

Non-Functional Metric

Latency

Quality of Experience

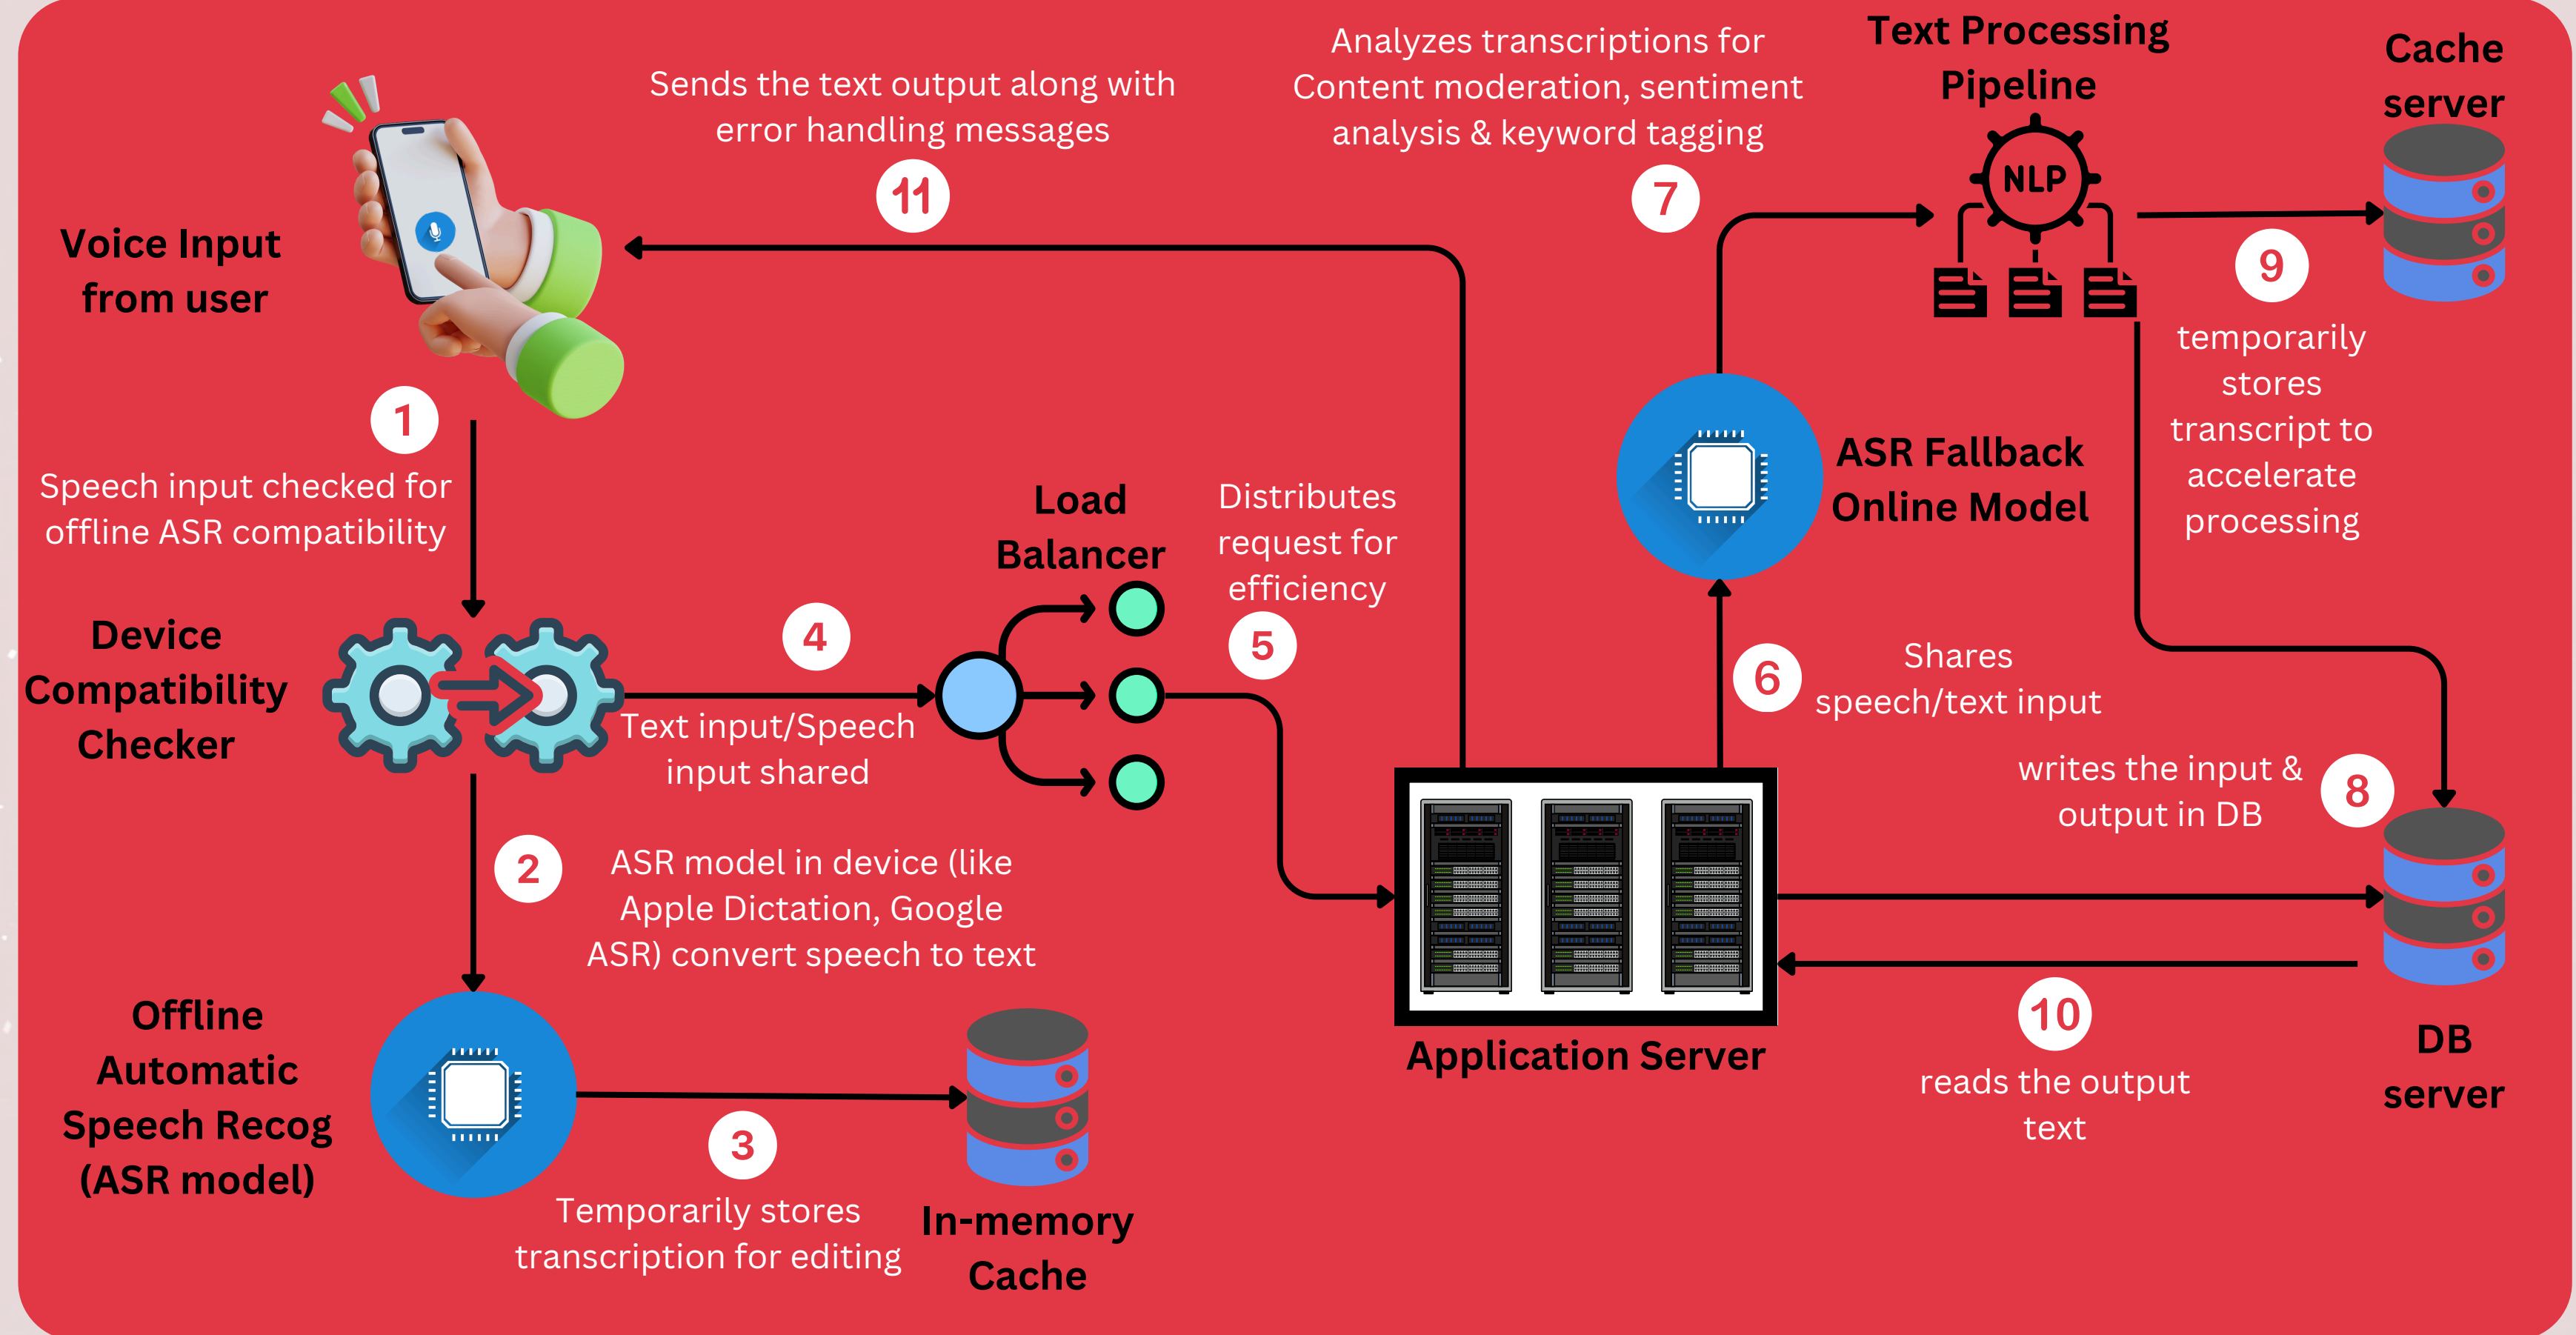

API Response Time

Speed of conversion

Memory & CPU utilization

Feasibility Risk

High-Level System Design
